

National Time & Signal Clock/Speaker units are designed to accommodate a 10 or 12 inch clock in the same enclosure as an 8 inch conventional speaker.

The front trim installs on a factory supplied wall box equipped with a hanger plate to receive angular hanger brackets. No fasteners are visible on the trim plate. In the wall box, a divider separates the clock and speaker and the speaker side is acoustically treated. A terminal strip attached to the box simplifies wiring of the unit.

The entire assembly is metal constructed and the trim plate is attractively finished with white enamel. The matching clock and speaker bezel are finished in powder gray. Other finishes are available.

For installations where it is desirable to install the clock and speaker separately, a matching speaker grille is available. The recessed clock and speaker wall boxes are installed together on a horizontal or vertical plane. No trim plate is required as is used on combination units.

*\*Consult factory for a vertical mount unit.*

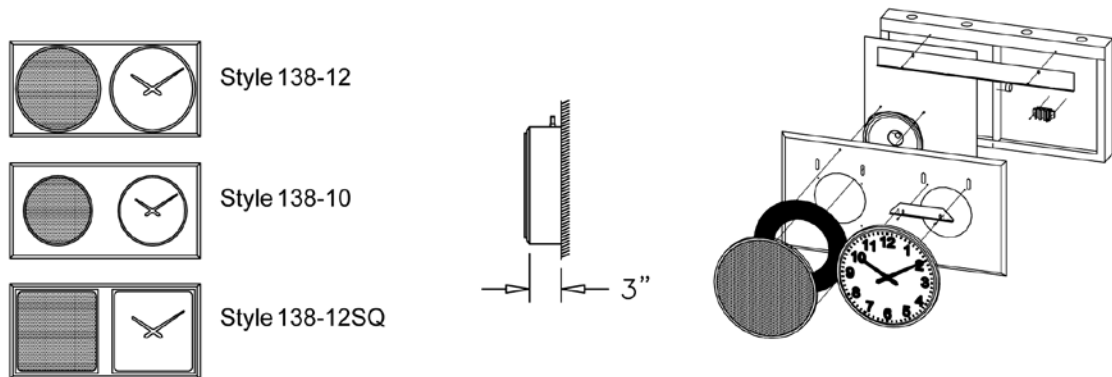

MODEL 138-12  
shown with  
Clock 030-12

## Features:

- Attractively Designed
- Durable Metal Construction
- Flush or Surface Mount
- Matching Speaker Bezels
- Acoustically Treated
- Round or Square Clocks
- Terminal Strip Connections

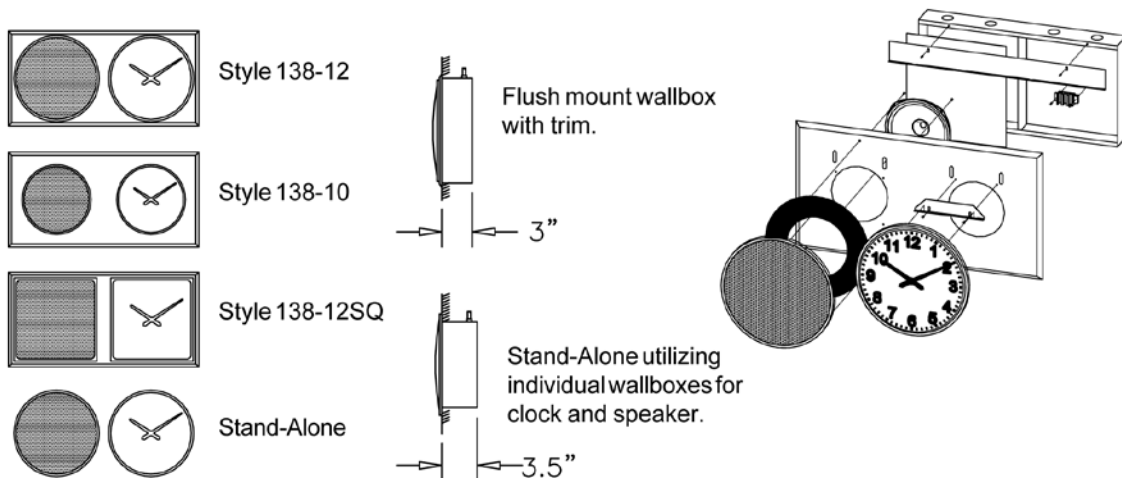

## Surface Mount Clock/Speaker Units
