

NATIONAL TIME now offers a digital clock protective guard superior to other models. Manufactured with heavy duty 18 gauge steel, this guard will stand up to the most demanding installations. The tough polycarbonate window provides obstruction-free viewing of the clock not found in wire guard versions.

The Semi-flush Clear-View Guard will protect up to a 4" digital clock when installed using a flush mounted electrical box. The Surface Clear-View Guard is used when a surface mount enclosure such as D400-SURF BOX is used. (See Bulletin C-394) This deeper guard has a slot centered on one side to accommodate surface conduit or other surface mount wire raceways.

The guards are finished with Powder Gray paint to match the standard digital clock finishes. Other colors are available upon request.
